ITE5432 - J2EE Business Components

Class Activity 3

HUMBER POLYTECHNIC

Project Requirements

Create a web service for Employee Management System. Users should be able to:

- Get all the employees
- Add a new employee
- Update an employee
- Delete an employee

Create a new Employee.

Employees List

Add Employee

Employee First Name	Employee Last Name	Employee Email	Actions
John	Cena	john@gmail.com	Update Delete
Ramesh	Fadatare	ramesh@gmail.com	Update Delete

Update Employee.

Employee Management System

Update Employee

John

Cena

john@gmail.com

Update Employee

Back to Employee List

Testing Endpoints

- Use Postman to test each endpoint
- Take screenshots and compile a word document

Submission

- Submit your code through GitHub repository

- Compile a document with output screenshots and organize them with appropriate labels and explanations for each use case. Upload the document on blackboard

- Log in to your Blackboard account.

- Navigate to the **"J2EE Business Components - ITE-5432-IRA"** course and `Assessments -> Labs -> Class Activity 3` section.

- Upload the compiled document in the designated area.

Rubric

Deliverables	Score
Code Submission through GitHub	50%
Compiled document with screen-shots Submission on the Blackboard	50%

THANK YOU.
